NEW !!

- For every kind of metal both very hard and soft
- Suitable for flat, round and irregular pieces
- No need for adjustment if used inclined or inverted
- No affected by thickness of sample
- For thin surfaces: down to 0.08 mm thickness and large parts
- Different scale on the display
- Memory of the results 100 values (each scale)
- Average of the stored results.
- Repeatability + / - 0,5 HR on test block
- Programmable tolerance HI - OK - LOW

Portable hardness tester easy to use in every position also inverted, no cables, excellent accuracy and reproduceable results from measure of penetration depth under constant force.

Small penetration assure excellent result on thin surfaces, as cromium coating or thin parts as shave blade profiles, pipes, with a wall thickness < 0.1 mm. infinita range of hardness scale from HB=5 to HV1= 1865

Field of application for AFFRI® Metaltest

	← soft	hard →	
HRA - Rockwell A	20	92	For hard steel, nitriding, cementation, roller, steel for tools, soft and hard materials
HK - Knoop	25	97	For soft steel, non ferrous metals
HRC - Rockwell C	0	80	For hard steel, nitriding, cementation, roller, steel for tools
HRB - Rockwell B	26	100	For soft steel, non ferrous metals
HR30T - Rockwell 30T	16	83	For soft steel, non ferrous metals
HB5 - Brinell 5	5	205	For aluminium, soft aluminium alloy cast iron, bronze, brass
HB30 - Brinell 30	66	884	For heat treated steel, annealed steel, drawn products, deep-drawn strip
HV - Vickers	13	1865	For all material
R - Tensile module N/mm ²	226	2898	For heat treated steel, annealed steel, drawn products, deep-drawn strip
HR15N - Rockwell HR15N	69	93	For hard steel, nitriding, cementation, roller, steel for tools

Technical characteristics

AFFRI -METALTEST is a portable Rockwell Hardness tester with HRC direct digital read-out and conversion to other scales through table included. It is designed for hardness tests on particularly cumbersome items, materials in the warehouse, and pieces which cannot be tested on a bench Hardness Tester. Very thin metal such as shearing bands, surfaces in hardened metal such as superficial hardness starting from a thickness of 0.08 mm. It does not spoil the surface because it produces micro-indentations.

- It works on the Rockwell principle, with preload and load.
- There is automatic zeroing and memory of last result.
- Very light and compact with microprocessor incorporated; liquid crystal, digital display indicating the hardness value which is fixed and memorized on the display until the next test, allowing tests to be done even where there is little light.

- It is child's play to use it: just place the hardness tester on the surface to be examined and press the handgrip right down; release the pressure, the piece hardness immediately appears on the display.
- It runs off one 9 Volt battery, which should last for 2.000 tests.
- The penetrator is a diamond cone.
- It is supplied with a calibrated reference specimen.
- Measures 16x16x12 cm.; weight: Kg. 1.2
- Conform to Standard ASTM B-724

PERFECT AND EFFECTIVE MEASUREMENTS INCLUDING THE FIRST TEST

Applicable accessories

Standard

- Diamond indenter
- HRC test block
- Adjustable base for test on flat and round pieces up to Ø 200 mm.
- Tables and instructions sheet for use
- Supplied with certificates on SIT primary samples.

Extra

- Art. 2310 large "V" support for round surfaces with more than Ø 200 mm.
- Art. 2312 stand support with a series of anvils for test on small pieces working opening mm. 100 working depth mm. 65
- Art. 2315 three points base for irregular surfaces and large round pieces.
- Art. 2316 support to perform tests on extrusion screws
- Art. 23631 Handclamp

Optional: Art. 2315
For irregular surfaces Coils

Optional: Art. 2316 V long base
Easy test on long screws
